To the Group,

I can say that I have had the pleasure of working Bill and his DX-60 on the air. It was last spring at Dayton and I was doing a little relief for the ops at the AMI station.

Bill's DX-60 has the best sounding AM of anything other than a commercial station that I have ever heard, bar none. I recommend getting a copy of of the May 2000 ER and checking out his article.

73,

Paul Monroe, W9MEH

Spent many hours(abt two years) next to an ARC-27 rollover cage in the late '60s-early '70s on second shift. Worked in a repair facility at night while going to school in the day time.....Actually worked a set with serial BRF001...we called it Noah's ARC. I bought a surplus 608 for $15 just for evil nostaglia. Last time at Mike Murphy's in El Cajon he had a cage. Oh misspent youth.....!!

Subject: Help fixing RBH cabinet.

Group;

I've been working on a Navy RBH-1 (National nc-156-1) that I've had for some time. It's comming along pretty well execpt for one problem. Somewhere along the line the set took a hit in the top center of the face of the cabinet, at the top of the front bezel. Both the bezel and the cabinet were pushed in about 3/8 of an inch. I took off the knobs, and the front bezel, and was able to straighten the bezel. But I can't "pull" the bend out of the cabinet. I tried putting a hard wood block across the front of the set, and pulling the pushed in portion forward with a "C" clamp and wood block. It helped some, but not completely. Any one have any ideas how I can pull the front of this cabinet back out straight. The ridge becomes the top of the set that the top door sets on is not making this any easier.

Tnx + 73
